

Rise

Rise stand up lift: compact, quick and comfortable

The Rise active patient lift is designed with the user in mind. Its very compact base makes the lift very manoeuvrable and particularly well-suited for use in small spaces. Due to the short footplate, the Rise can be positioned close to the patient, bringing the handles within easy reach. Finally the swift and easy-to-follow lifting speed and the leg rest with memory foam top layer guarantee a comfortable lifting experience for all.

The Rise is standard equipped with an internal NiMH battery with charger. The very large capacity of the battery ensures that the lift is always ready for use.

The patented esense drive system makes it possible to move the lift with minimal force in any direction. A force sensor in the handlebar feels how the lift is pushed and translates this to the right direction and speed of the electric wheel under the lift. The low operating forces prevent physical complaints caused by pushing and pulling. The intuitive control guarantees a minimal learning time. Additionally esense patient lifts are standard equipped with Ergo feedback to alert the user when too much force is used to move the lift. The live feedback helps users to work within the ergonomic guidelines and thus contributes directly to prevent physical overload.

Specifications

Rise

Weight capacity	180 kg
Length of base (frame)	90 cm
Height of base	11,5 cm
Maximum width frame - closed legs	64,5 cm
Maximum internal width frame - open legs	84,5 cm
Vertical range	75 cm
Protection grade	IPX2
Battery type	NiMH
Battery voltage and capacity *	24V 9Ah
Average number of transfers on a full battery **	75
Guaranteed battery lifetime in charge cycles	500 x

* The Rise is also available in a manual version without esense drive system. This version is equipped with a lower capacity battery.

** Calculation available upon request.
